

I made this site responsive by adding a image gallery in the about section of the website. This gave an example of the type of people who run this website is friendly and safe environment for everyone. The html structure was following a rule which made the entire website consistent without the user being lost. I made sure the landing page was a page dedicated to what the entire website is about. I really think my website has come a long way from being nothing but html and looking black and white. It is not complete, there are still many things to add or correct to fully achieve a “professional” feel for a website like amazon or eBay which have spent a lot of money and time in developing to what their site is now. I have enjoyed this web class. I am not going to lie; Coding is difficult but at the same time it can be fun to code. I came into this class knowing nothing about coding after this semester iv learned so much about coding and web development.
